

CLEVER HUB RESOURCES

At Cleverchefs, we believe that fostering a deep understanding of food is integral to our mission.

By teaching children about the journey of food, introducing them to different cuisines, and highlighting the importance of balanced nutrition, we empower them to make informed choices about what they eat.

We view food education as fundamental to promoting health, well-being, and sustainability among young people. To that end, we have created three resource packs with different topics from sustainable fishing, to gardening tips and a celebration of British Beef Week. The pack contains useful information, tips, and activities to understand better the importance of sustainable consumption of fish and seafood. More packs are to be added to this virtual library.
